ASSUMPTION

Hearing well is the foundation for good, effective communications between any two people. With clarity, meaningful decisions can be made.

CHALLENGE

Is it possible to safely provide your staff and clients (or patients) with the benefits of clear sound and comprehension, in spite of barriers and background noise?

SOLUTION

This two-way speech transfer system features a mounted microphone on the “customer” side, a stand-up microphone on the staff side and overhead, surface mounted speakers on both sides.

DETAILS

Illustrated above is the standard kit as it appears installed with a clear, 4' x 4' polycarbonate shield and angled aluminum supports. The kit includes all hardware, *hearing loop, instructions, wiring and electronics needed for a permanent, “new normal” and safe solution in response to the pandemic. Also available: custom configurations and complete installation. Call for kit pricing and delivery times.
